

Can you show your science learning through your art?

Can you create something that will spark a science conversation with people in your class?

You could draw or paint a picture, design a print, take a photograph... it's up to you! You can work on your own or you can work with a partner to create your work. You just need to get creative to inspire a discussion in science.

Then explain the science learning that is 'hidden' in your artwork using no more than 150 words; you can write this yourself or ask an adult to help you to record your ideas.

*The winning works of art will each be made into a new **Start With Art** activity that will be published on the **Explorify** website, ready to be used by more than 100,000 teachers with their classes of children in schools around the world. The winners will also receive a **£50 book token**.*

There are two age categories:

- 7 years and under*
- 8 -12 years*

Send your entries to Mr Terry by Monday 17th March – either bring your entry in to school or send a photo to lterry@priorityacademies.co.uk
